

Eurofluid ErP compliance with Smedegaard

Eurofluid Handling Systems, now in its 25th year of business, has a wealth of pump industry experience and technical know-how. It is constantly evolving, offering its customers the latest, most efficient, technologies in both heating and hot water.

EUROPAK
Inverter-controlled booster sets

At Eurofluid Handling Systems the emphasis is on quality of service and that, more than anything else, entails listening to and understanding precisely what the end-user requirement is, and then working closely with the consultant and contractor to devise the most appropriate, high-performing and cost-effective solution for the client.

This quality of service is matched by the quality of the product portfolio. Eurofluid deals exclusively with market-leading brands and has strong partnership agreements with a number of manufacturers, a typical case in point being Smedegaard.

Founded in 1942, Smedegaard is the longest-established pump manufacturer in Europe, and is part of the giant KSB group which had a turnover of €2.2billion in 2012.

Eurofluid has direct access to the vast reservoir of experience, knowledge and technical know-how this represents, not just with Smedegaard-branded products, but also with the Smedegaard-produced Europak inverter-controlled booster set range that is specifically manufactured for the Irish marketplace to a specification devised by Eurofluid.

Features and benefits standard across the entire Europak range, from entry level models right up to the top-end units, include:

- WRAS approved;
- Flow rates up to 160l/s;
- Pressure up to 15 bar;
- Single, twin and multiple pump sets;
- Built-in dry run protection;
- Pump mounted inverters;
- Anti-surge soft start;

All are ErP Regulation compliant and also conform with various other national and international quality marks. Indeed, many of the products now coming on stream from Smedegaard are also future-proofed in that they comply with the requirements of legislation yet to be enacted. An example is the new Magneta light commercial/commercial pump range featuring magnetic motors, speed control and the newly-developed Eco Mode.

Other products within the Eurofluid range include:

- Boilers, fully condensing and with exchangers in 316 stainless steel;
- Fire hose reel booster packages;
- Pressurisation packages;
- Heat exchanger packages;
- Direct fired water heaters;
- Air and dirt (+hydraulic) separators;
- Calorifiers and buffer tanks.

There is a growing requirement in the marketplace for off-site Packaged Plant Room (PPR) manufacturing. Eurofluid is to the forefront in the manufacture of such integrated portable PPRs incorporating some or all of the above plant items. The advantages are:

- Compact design;
- Factory-build quality;
- Greater site safety;
- High productivity;
- Improved deployment of site labour;
- Customised build to any specification.
